

Amar Muminović

Full-Stack & Mobile Engineer

Bosnia & Herzegovina · github.com/MumeDoktor · linkedin.com/in/amar-muminovic-ab91b6353

SUMMARY

Full-Stack and Mobile Engineer with 3+ years of experience shipping production applications across Flutter, Angular, React/Next.js, and NET backends. Comfortable owning a feature end-to-end — from database schema to mobile UI. Deepened expertise in AI/LLM integrations across multiple projects: FitMind AI (GPT-4o adaptive coaching — live on Google Play), AI Interview Coach (Claude-powered job analysis and real-time voice mock interviews), and AAFAS (Anthropic tool-use API for automated financial advisory). Equally effective as a sole developer and as a technical lead in cross-functional teams.

EXPERIENCE

CreditGenius

Jan 2025 – May 2026

Full Stack Developer — .NET, Angular (Contract)

Remote · UK

- Building and maintaining backend services for a financial platform using ASP.NET Core, Entity Framework, and SQL Server
- Designing and optimizing **database schemas, queries, and stored procedures**
- Implementing business logic, REST API endpoints, and payment/subscription workflows in a production environment
- Collaborating with senior engineers on database design, architecture decisions, and production deployments
- Worked with **Angular** on frontend features and internal tools, collaborating closely with backend services
- Implemented file storage and retrieval using **AWS S3** for handling user-generated content
- Built **PDF generation workflows** for reports and documents in production systems
- Integrated **email sending functionality** using **Amazon SES**, including transactional emails and notifications

P23 d.o.o

2023 – 2026

Team Lead, Mobile & Web — GiBud (gibud.no)

Remote

- Led development of a Norwegian e-commerce and live-auction platform serving both web (Next.js) and mobile (Flutter) clients
- Sole Flutter developer: designed scalable BLoC architecture, real-time bidding, live chat, and push notifications end-to-end
- Team-led the web platform: reviewed PRs, enforced architectural standards, and mentored junior developers
- Implemented real-time features (live auctions, bidding, chat) using Ably WebSockets and Firestore listeners
- Managed media storage and file delivery through Cloudflare R2
- Contributed to CI/CD pipelines, Docker containerisation, and deployment workflows
- Collaborated with backend developers to integrate APIs and deliver end-to-end features

P23 d.o.o

2023

Flutter & Full-Stack Developer — Corner Table

Remote

- Developed a cross-platform Flutter application for a guest recognition platform used by hospitality venues
 - Built complex application flows using BLoC architecture and GoRouter, focusing on scalability and maintainability
 - Implemented Firebase integrations for authentication, real-time data synchronization, analytics, and cloud services
 - Collaborated closely with designers and product stakeholders to transform Figma designs into production-ready features
 - Developed venue management, guest management, profile, onboarding, and communication workflows across the platform
 - Contributed to MVP delivery within a cross-functional team, helping bring the product from concept to a launch-ready state
-

PROJECTS

FitMind AI

2026 – Present

Founder & Solo Engineer

[Google Play: FitMind AI](#) · [fitmind-ai-web.vercel.app](#)

- Built and launched an AI-powered adaptive fitness coaching platform from scratch to production as the sole engineer, owning the Flutter app, Firebase backend, AI infrastructure, subscriptions, and release pipeline.
- Developed an LLM-powered coaching engine (GPT-4o) that generates personalised **4-week training and nutrition plans**, then automatically **re-evaluates user progress every week** (performance, adherence, body weight, feedback) and adapts future workouts and meal plans.
- Implemented an interactive **AI Coach** that allows users to discuss their training, nutrition, recovery, and goals in natural language while providing contextual guidance based on their current fitness plan.
- Built dynamic nutrition planning with AI-generated meal plans, including **meal replacement** functionality that instantly swaps meals when users dislike an ingredient or don't have specific foods available.
- Designed intelligent workout execution features including **pre-workout readiness check-ins**, session-specific adjustments, exercise weight recommendations, progress feedback, and adaptive progression throughout the program.
- Integrated recurring **monthly and yearly subscriptions** using Lemon Squeezy and implemented the complete premium access flow.
- Successfully published and now maintain the application on Google Play, managing the full production lifecycle from testing and release management to post-launch improvements.
- **Tech:** Flutter · Dart · BLoC · Firebase (Auth, Firestore, Cloud Functions) · GPT-4o · Lemon Squeezy · Next.js

AAFAS — Automated AI Financial Advisory System

2026 – Present

Solo Engineer

- Building a CLI-driven personal finance analysis tool that uses the Anthropic tool-use API to orchestrate three deterministic detectors: recurring subscription detection, anomaly flagging, and duplicate subscription identification
- Engineered a confidence-scored recurring subscription detector (monthly and yearly) with price-change alerts and active/lapsed classification; anomaly detector with severity scoring; and a category-based duplicate subscription finder
- Applied strict engineering conventions throughout: integer-cent money arithmetic (no floats), UTC-only datetimes, frozen dataclasses, mypy --strict, and a privacy-first “analyse, advise, forget” design (raw data never written to disk)
- **Tech:** Python · Anthropic Claude API (tool-use) · mypy · pytest · Typer CLI

AI Interview Coach

2026 – Present

Solo Engineer

- Building a full-stack AI-powered interview preparation platform with Next.js 16, Auth.js v5, and PostgreSQL - featuring CV upload and parsing, Claude-powered job analysis, and live voice mock interviews with real-time AI feedback
- Implemented end-to-end voice interview pipeline: microphone capture, Groq Whisper speech-to-text transcription, streaming AI interviewer responses (llama-3.1-8b-instant) for low-latency real-time feel, and per-turn DB persistence
- Integrated Claude (claude-sonnet-4-6) for structured job analysis (key topics, company culture, interviewer profiling) and automated post-call reports with scoring, strengths, improvement areas, and recommended practice topics
- **Tech:** Next.js 16 · TypeScript · Auth.js v5 · PostgreSQL · Prisma ORM · Claude API · Groq Whisper · Tailwind CSS · Shadcn UI · Zod

Nova - Autonomous AI Video Agent for TikTok

2026 – Present

Solo Engineer

- Building an autonomous AI content agent that analyses a TikTok account, proposes video ideas, sources footage, and **edits finished short-form videos by controlling Adobe After Effects** on the local machine, with no manual editing step
- Built a **TikTok analytics pipeline**: a background worker syncs public profile and video data (views, engagement, posting times) into SQLite, and a Next.js dashboard shows performance charts, per-video breakdowns, and the agent's account analysis
- Designed the agent to reason over **pre-computed statistics** (calculated in SQL/TypeScript and passed to the model as facts) rather than raw data. This keeps its conclusions grounded and prevents it from repeating topics already covered
- Implemented a multi-step creative flow: **account analysis** → **content idea** → **script** → **style reference** →

footage selection → **editing decisions** → **After Effects execution** → **review** → **final video**. Reference videos are distilled once into a reusable style profile

- Local-first architecture: three Node.js processes (dashboard, worker, agent) share a single SQLite database, with an event system for agent progress and a chat interface for directing edits in natural language
- **Tech:** TypeScript · Node.js · Next.js · SQLite · Claude API (Sonnet, Opus) · Adobe After Effects scripting · SocialCrawl API

TECHNICAL SKILLS

Mobile	Flutter, Dart, BLoC, Provider, Firebase SDK, Lemon Squeezy
Frontend	React, Next.js, Angular ,TypeScript, Tailwind CSS, Shadcn UI
Backend	Node.js, Express.js, ASP.NET Core, REST APIs, Entity Framework
Databases	PostgreSQL, MySQL, MongoDB, Firestore, Prisma ORM
AI / LLM	GPT-4o, Claude API (tool-use, structured outputs), Groq, prompt engineering, RAG patterns, embeddings
Cloud / DevOps	Firebase, AWS (EC2, S3, SES), Docker, Cloudflare R2, CI/CD, Git
Methods	Agile/Scrum, code review, technical leadership

LANGUAGES

Bosnian — Native **English** — Fluent (professional)
